Background In 2009 in the Barossa Valley, South Australia, a group formed to promote the Respecting Patient Choices Program and ACP in their community. The group represents nurses, (aged and acute sites), doctors, lawyers, Ministers of Religion, Justices of the Peace, Emergency Services and community members.

Aim To determine if active promotion of ACP has improved awareness and acceptance in the community

Method Data collected over a 4 year period to determine public awareness of ACP in our local community. Information collected included age, gender, existing ACP documents and their storage location. At the end of the 4 year period data collected was analysed to determine if the pro-active approach had been effective in the above stated areas.

Results Over 4 years the table shows a 100% increase of people with Advanced Care Plans. The unexpected positive outcome is the shift in awareness of ACP to younger age groups. Anecdotally people surveyed indicated an awareness of the Respecting Patient Choices branding and literature received through legal services, health services, medical centres and community avenues.

Discussion Direct contact with individuals has proven to be an effective way to promote community awareness and acceptance of ACP in the rural community.

Conclusion Data collected proves that active promotion of ACP with the community results in a positive change of attitude towards ACP—no longer a taboo subject.

	Number surveyed	Average age	% Male	% Female	% with ACP	Location of documents		
						Lawyers office (%)	Doctors surgery (%)	Local hospital (%)
2009	25	79	36	64	16	25	25	0
2010	16	67	46	54	18	11	0	6
2011	88	66	22	68	27.5	60	32	18
2012	75	66	25	75	32	44	22	17
