LEAVING HOME - MANAGING CHANGE

Karen Clarke. St Wilfrid’s Hospice, Eastbourne, UK

10.1136/bmjspcare-2013-000591.94

Aim To investigate the relationship between psychological attachment style and emotional responses to moving into a purpose built hospice.

Background Mental representations of self and other are formed by our primary relationship. Internal working models inform subsequent relationships, world view and responses to life events. Attachment style research demonstrates predictive value for staff responses in clinical environments. In 2013 our hospice service relocated to a bespoke new build. Practical issues were addressed by project management, but psychological and emotional aspects were unexplored.

Methodology After favourable University ethics review the study took place in an English, 17 bedded consultant-led hospice with daycare, and community services. All staff and visiting volunteers were eligible for the study. A modified adult attachment questionnaire with added elements was circulated prior to moving. Gender was not collected to ensure confidentiality.

Results 42 questionnaires (31%) were returned: 34 staff, 8 volunteers. Statistical analysis revealed no difference between staff and volunteers so they are reported together. The median length of service at the old Hospice was 6.2 years; range <1 to 23 years service. Older staff had worked for the hospice for longer (p < 0.05).

Anxious and avoidant attachment styles were not related to length of service in the hospice. Staff with anxious attachment

Abstracts

P72 LEAVING HOME - MANAGING CHANGE

Introduction The hospice decided to formulate a new nursing pay structure which moved away from Agenda for Change principles and integrated an updated competency framework.

Aims

• Create a pay policy to reflect local market conditions and respond to hospice needs whilst being flexible
• Develop a “balanced” nursing skill mix which reflects the hospice’s needs
• Establish core requirements for each nursing post
• Link competence with pay
• Develop a pay and competence framework in consultation with staff.

Method

Using best practice documents, the hospice reviewed and updated existing competencies before implementation. Registered Nurses engaged with the new process by:-

• Attending teaching sessions on
  • Introduction to Competencies: How, What, Why and When!
  • Getting Started with your Competencies
• Meeting with Line Managers on a 1:1 basis

A structure consisting of Foundation, Intermediary and Terminal levels of competency and pay was introduced.

Results

The implementation of a competence related pay structure appears to have had a positive effect on staff engagement and motivation. Improved awareness, communication, education and support have resulted.

Staff feel more confident working at the competency level which reflects their experiences and skills.

Conclusion

Having the competencies linked into Performance Development Review process enables a cycle of reflection, support, training and evaluation.

The framework encourages and supports staff to work to their potential to provide specialist palliative care and respond to organisational needs.

P73 DOES THE ATTACHMENT STYLE OF HOSPICE WORKERS PREDICT THEIR EMOTIONAL RESPONSE TO A MOVE INTO A BESPOKE NEW BUILD UNIT?

Aim Does the attachment style of hospice workers predict their emotional response to a move into a bespoke new build unit?

Background Attachment style research demonstrates predictive value for staff responses in clinical environments. In 2013 our hospice service relocated to a bespoke new build. Practical issues were addressed by project management, but psychological and emotional aspects were unexplored.

Methodology

After favourable University ethics review the study took place in an English, 17 bedded consultant-led hospice with daycare, and community services. All staff and visiting volunteers were eligible for the study. A modified adult attachment questionnaire with added elements was circulated prior to moving. Gender was not collected to ensure confidentiality.

Results 42 questionnaires (31%) were returned: 34 staff, 8 volunteers. Statistical analysis revealed no difference between staff and volunteers so they are reported together. The median length of service at the old Hospice was 6.2 years; range <1 to 23 years service. Older staff had worked for the hospice for longer (p < 0.05).

Anxious and avoidant attachment styles were not related to length of service in the hospice. Staff with anxious attachment...
**Abstracts**

styles grieved more (p < 0.003) and felt it was wrong to sell the old hospice (p < 0.05). Both anxious and avoidant staff with higher scores were less likely to want to move (p < 0.05).

**Conclusions and Applications to Hospice practice** Our data suggest that attachment style is stable despite the stress of working in a hospice environment. As in other workplaces anxiously attached personnel have predictably more negative emotional responses to life events. This is useful information for staff care and suggests some groups of staff may benefit from targeted clinical supervision during periods of great change.

**P74 TEARS AT THE WEDDING**

Clair Sadler, Steve Nolan, Gill Sanson, Linda Warren, Linda Cox, Anne Cullen. Princess Alice Hospice, Esher, UK

10.1136/bmjspcare-2013-000591.96

**Background** A diagnosis of cancer can mean that the ‘taken for granted’ future is disrupted which impacts on self-image and social roles. People may strive to contribute to a meaningful life (Armstrong-Coster, 2004) and develop contingencies to preserve their sense of self-identity so remain within their social worlds (Becker, 1997). In their everyday work, hospice staff face tensions and conflicts within families as well as the loss of anticipated social roles for their patients. In the case presented, the anticipated social role of wife in a young dying women brought into focus personal and professional unity and conflict for hospice staff.

**Aims** To explore the challenges of a hospice responding to a family anticipating bereavement.

**Methods** Through the medium of a Schwartz Centre Round 4 members of hospice staff presented their contrasting experiences and feelings evoked by hospice weddings. In keeping with the SCR, a multidisciplinary discussion was then opened up to staff.

**Results** The juxtaposition of different professional and personal beliefs and values was explored and the challenge of how to manage complex social dynamics of meeting the patient’s and family’s needs when death is a spectre at the wedding celebration. The discussion focused on opposing views of whose needs are the most pressing: the dying woman or the needs of a caring family anticipating bereavement.

**Conclusion** Resolution is not the aim of the SCR but open, honest conflict and discussion in a confidential environment allowed the ‘unspeakable’ to be spoken. In dealing with such complex issues in a hospice setting, the SCR allows an effective means of exploration not necessarily resolution.

**Application to hospice practice** Schwartz Centre Rounds are protected time to allow hospice staff the space to explore socially and emotionally difficult situations.

**P75 YOU’RE A LITTLE PART OF A JIGSAW. GOING TO SCHWARTZ CENTRE ROUNDS, YOU SEE THE OTHER BITS OF THE JIGSAW**

Andrew Knight, Anne Cullen, Jennifer Todd, Liz Reed, Clair Sadler, Craig Gannon. Princess Alice Hospice, Esher, UK

10.1136/bmjspcare-2013-000591.97

**Background** Schwartz Centre Rounds (SCR) offer healthcare providers a protected time to talk openly and honestly about situations in their work that challenge them on a human level. Evidence suggests that SCR’s strengthen team working and are valuable to the healthcare providers which translates to the care they offer their patients.

In 2012, Princess Alice Hospice was one of the first hospices in the UK to adopt SCR’s and opened the rounds to both clinical and non-clinical staff and volunteers. Presenters have included nurses, doctors, housekeeping staff, healthcare assistants, trustees and volunteers.

**Aim** To explore in detail the experience of multidisciplinary staff and volunteers of SCR’s in a UK hospice after one year.

**Methods** A mixed method approach triangulating quantitative evaluation data from the first year and qualitative data from 3 focus groups (presenters, attendees and non-attendees). Categorical indexing was generated from the topic guide themes and sub-categories generated within the identified key themes.

**Results** Over the year SCR’s have had a mean attendance of 46 people (range 37-57). They are consistently well evaluated with 60% gaining knowledge helpful in their work, 98.2% gaining insight into how others think/feel in caring for patients and 85.1% feeling the SCR will help them work better with colleagues. Twenty six people attended three focus groups. Each group was representative of clinical and non-clinical staff as well as volunteers. General themes: values and challenges of an inclusive multidisciplinary SCR; appreciating the roles and experience of others; time and commitments; dissonance between the personal and professional self; safety versus exposure; and communicating about Schwartz in a UK Hospice.

**Conclusion** Overall, SCR’s are well valued at Princess Alice Hospice influencing individuals in their everyday work and working relationships. Issues around communication, format and representation have been taken forward to further develop SCR’s at the Hospice.

**P76 RAGS TO REVENUE**

Rowena Midgley, Dorothy House, Bradford on Avon, United Kingdom

10.1136/bmjspcare-2013-000591.98

A pilot scheme was set up in September 2012 to re-evaluate our current textile recycling process, which was selling all the Rags* from our retail shops onto textile recyclers. This scheme examined the possibilities of increasing revenue by re-sorting our discarded Rags, focusing initially in four specific areas; Vintage/Retro, clearance items (to support a new shop), saleable items returned to standard shops and true Rag items. These results showed the potential of 16% of total rags being recovered, giving a large extra revenue opportunity.

The next challenge was to find a dual purpose site, large enough to support the resorting project and allowing expansion into other areas, with a shop attached to sell the clearance items thus avoiding further transport costs. In March 2013 the Resorting Centre was opened with a full time manager and two part time deputies, the Clearance shop opened at the start of April 2013. In order to monitor the outputs of the project, all items that are returned back to shops are tagged with a pre printed barcode for our Epos system to track. To fully understand this concept, all Shop Managers were invited to see the process first hand.

Additional revenue benefits to this project involve the team expanding into an upcycling section encompassing areas such as, bunting, felting, and removing unusual buttons, to sell in the
