level. There was evidence that the increased confidence had been sustained.

This project demonstrates how the hospice is engaging with its local community to build capacity and better equip everyone in supporting young people experiencing loss and bereavement.

**P141**  A REVIEW OF THE MULTI DISCIPLINARY TEAM’S (MDT) PERCEPTION OF THE PSYCHOSOCIAL SERVICES TEAM’S (PST) INTERVENTION ON THE IN PATIENT UNIT (IPU)

Martin Riley, Hospice in the Weald, Pembury, United Kingdom

10.1136/bmjspcare-2013-000591.163

This project considered how counselling is offered, accessed, received and perceived on the In-Patient Unit (IPU) at Hospice in the Weald. Questions were formed about adapting and modifying the existing service to better meet the needs of our service users. Unstructured interviews were held with professional MDT groups, inviting them to discuss perceptions of psychosocial care and how patients’ needs are met on the IPU. Sessions were audio recorded, transcribed and analysed.

A new model of care was proposed. Counsellors rotated through IPU for 6 weeks. At the end of the rotations, each counsellor was interviewed, as was the larger MDT (in one collective group). Interviews were recorded and salient learning points identified. After each rotation, questionnaires were given to IPU staff to identify the benefits, things to change and give feedback.

We learned that traditional methods of referral, assessment and practice of counselling are inappropriate to the specialist setting of in-patient care. Questions about ownership of psychosocial care, referral processes, multidisciplinary aspects of collaborative working, audit/review and IPU admissions for psychological care were asked and partially answered in the study. Interviewing staff after the change in practice revealed much more satisfaction with the counselling service and many advantages arising from the change in practice. Improved MDT working and speed of access to counselling were cited most frequently.

The wider implications include considering how we modify our practice to better meet the needs of our service users. Working differently may lead to investigations about what we call this approach to the provision of psychological support to in-patients and their relatives. For some it’s still counselling, for others it’s an exciting challenge to expand both their practice and capacity to offer support to those facing the end of a life; particularly those who otherwise reject talking therapy.

**P142**  DISCUSSING PREFERRED PLACE OF DEATH WITH PATIENTS: STAFF EXPERIENCE IN A PALLIATIVE CARE SETTING

**Aims** To qualitatively explore staff members’ experiences of discussing preferred place of death (PPD) with patients at the Marie Curie Hospice Edinburgh (MCHE). A new model of care was proposed. Counsellors rotated through IPU for 6 weeks. At the end of the rotations, each counsellor was interviewed, as was the larger MDT (in one collective group). Interviews were recorded and salient learning points identified. After each rotation, questionnaires were given to IPU staff to identify the benefits, things to change and give feedback.

We learned that traditional methods of referral, assessment and practice of counselling are inappropriate to the specialist setting of in-patient care. Questions about ownership of psychosocial care, referral processes, multidisciplinary aspects of collaborative working, audit/review and IPU admissions for psychological care were asked and partially answered in the study. Interviewing staff after the change in practice revealed much more satisfaction with the counselling service and many advantages arising from the change in practice. Improved MDT working and speed of access to counselling were cited most frequently.

The wider implications include considering how we modify our practice to better meet the needs of our service users. **Introduction** In 2012 the Hospice extended the reach of its traditional family support services with two dedicated events for children and families. Each event was designed to facilitate remembrance, and promote self care and confidence within families whose lives had been inextricably changed through loss. The aims of the event included: to create a bespoke event for children and adults (both) independently and collectively through providing a range of creative and therapeutic activities.

**Method** 28 children in total attended the events which took place in July and November 2012. Led by the family support and bereavement care service, and supported by the art therapist and trained volunteers, children and families who had previously engaged in pre-bereavement support, or post bereavement 1:1 or small group support were invited to the events.

A range of activities were developed in consultation with the art therapist with a view to engaging children across a broad range of ages. Some sought to unify children and adult involvement. Activities included:

- Making memory felt
- Making a web of support using a ball of wool to create a shared bond
- Making an interactive advent calendar which featured on the Hospice website throughout December creating a meaningful focus as families faced a first Christmas.
