Destiny) approach to design, test and produce a local community development workshop ‘toolkit’ for anyone, not just professionals to use. The project, led by Hospice UK and commissioned by NHS England, resulted in a free online resource, a community of practice network (Source4Network) with a discussion site and a twitter community @ComDevCoP.

The co-design group for the work brought together hospices that had already begun their development journey as community engagers. The work further substantiated that each community has unique challenges and idiosyncrasies, the resulting toolkit reflecting a flexible locality driven approach with the intent to increase the connectivity across sectors, communities, neighbourhoods and social networks.

The co-design group of community engagers launched the tested tool kit in July 2019. It provides local communities an opportunity to harness the support of local interested members to provide improved community support for carers, those at the end of lives, going through a bereavement and/or lonely. The evaluation is ongoing and initial findings will be available by the Hospice UK conference in November 2019.

Acknowledgements to the hospices that supported the process are within the Hospice UK website page and community development toolkit.

This presentation will explore the impact of the piloted sessions and the ongoing work undertaken by the hospice in relation to building more robust compassionate communities.

**0-24** CARE IMPROVEMENT AND END OF LIFE: A PARTNERSHIP APPROACH

Emily Pardoe-Billings, Pat Roberts. St Giles Hospice, Lichfield, UK; Pathways4Life, Walsall, UK

There is a well-documented pressing need to improve care within settings where people with dementia are living. Providing good quality end of life care, especially for people with dementia in care homes, can prove particularly challenging. This includes enabling people to die in their own home rather than in acute hospitals, which is still the experience of many.

The Care Improvement and End of Life service is a collaboration between St Giles Hospice, Pathways4Life and Walsall CCG. It was created in response to the challenge of people with dementia dying in hospital. The aim of the service is to reduce unnecessary hospital admissions for people with dementia who are living in care settings in Walsall.

The core service consists of community-based Dementia Support Workers (DSWs) who work with care homes in order to provide expertise, insight and knowledge to further improve dementia and end of life care. The service also runs a monthly Carers Course to provide support and education for family carers. The DSWs strive to empower care home staff, people with dementia and their families through development sessions, support and guidance, along with a strong partnership working ethic.

The DSWs use a range of evidence-based tools, including the ‘Namaste Care’ approach, to advance a more holistic approach to dementia and care. This involves helping to create safe and relaxing spaces, and providing a broad spectrum of meaningful person-centred activities, some suitable for use with individuals even at the very end stages of their lives.

The service has improved understanding of dementia for staff in care homes and has improved confidence and well-being for family carers. The service was previously a finalist in the National Dementia Care awards in 2017 and in 2018 won an award for Best Innovation under the Accord Great People Awards.

**P-1** THE ELEPHANT IN THE ROOM. PROMOTING ADVANCE CARE PLANNING IN NORTH EAST ESSEX

Sally Thompson, Karen Chumbley. St Helena, Colchester, UK

Background In 2008 an end of life care government strategy cited research which showed that people don’t want to spend their last year or last days in hospital but this often occurred due to poorly coordinated crisis driven care. In response to this in 2013 the My Care Choices Register (MCCR) was
